Programación de Móviles

Almacenamiento de datos mediante la clase SharedPreferences en Kotlin

Segunda parcial

Almno. Angel Isaac Bejarano Flores

5°D

Mtro. Armando Román Gallardo

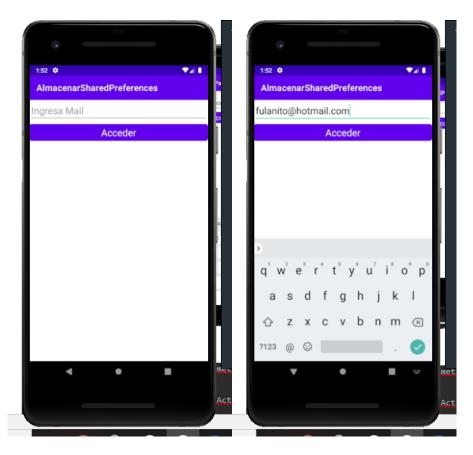

Jueves 19 de noviembre de 2020. Manzanillo, Col.

Problema 1

Codigo XML

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout</pre>
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
   xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">
    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:orientation="vertical">
        <EditText
            android:id="@+id/etmail1"
            android:layout_width="match_parent"
            android:layout_height="wrap_content"
            android:ems="10"
            android:hint="Ingresa Mail"
            android:inputType="textEmailAddress"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
        <Button
            android:id="@+id/b1"
            android:layout_width="match_parent"
            android:layout height="wrap content"
            android:text="Acceder"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
    </LinearLayout>
</androidx.constraintlayout.widget.ConstraintLayout>
```

Interfaz

Codigo Kotlin

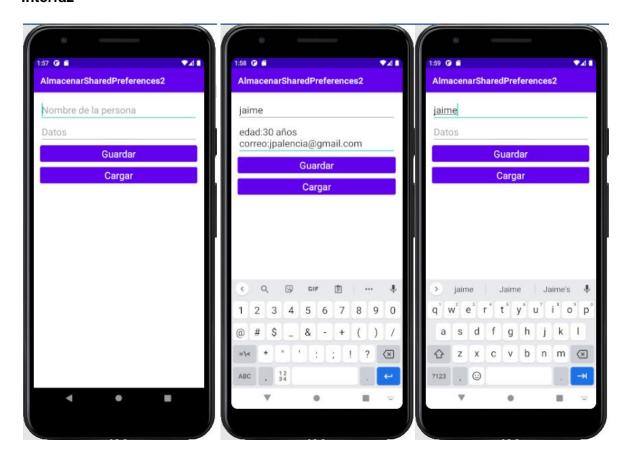

```
package com.example.almacenarsharedpreferences
import android.content.Context
import androidx.appcompat.app.AppCompatActivity
import android.os.Bundle
import kotlinx.android.synthetic.main.activity_main.*
class MainActivity : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        val preferencias = getSharedPreferences("datos", Context.MODE_PRIVATE)
        etmail1.setText(preferencias.getString("mail", ""))
        b1.setOnClickListener {
            val editor = preferencias.edit()
            editor.putString("mail", etmail1.text.toString())
            editor.commit()
            finish()
```

Problema 2

Codigo XML

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout</pre>
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">
    <LinearLayout
        android:layout width="match parent"
        android:layout height="match parent"
        android:orientation="vertical"
        android:padding="15dp">
        <EditText
            android:id="@+id/et1"
            android:layout width="match parent"
            android:layout height="wrap content"
            android:ems="10"
            android:hint="Nombre de la persona"
            android:inputType="textPersonName"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
        <EditText
            android:id="@+id/et2"
            android:layout width="match parent"
            android:layout height="wrap content"
            android:ems="10"
            android:gravity="start|top"
            android:hint="Datos"
            android:inputType="textMultiLine"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
        <Button
            android:id="@+id/b1"
            android:layout width="match parent"
            android:layout_height="wrap_content"
            android:text="Guardar"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
        <Button
            android:id="@+id/b2"
            android:layout width="match parent"
            android:layout height="wrap content"
            android:text="Cargar"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
    </LinearLayout>
</androidx.constraintlayout.widget.ConstraintLayout>
```

Interfaz

Codigo Kotlin

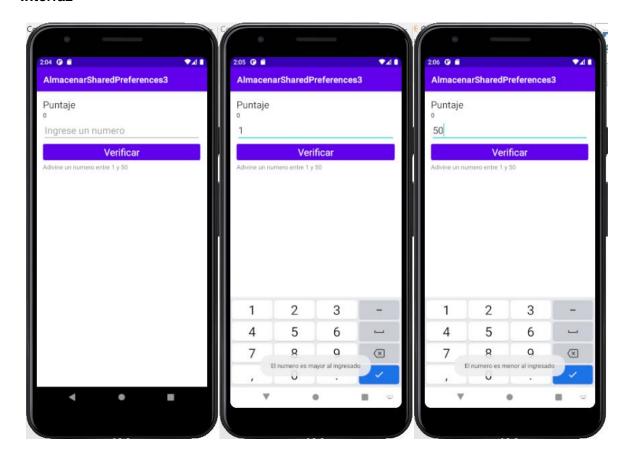

```
package com.example.almacenarsharedpreferences2
import android.content.Context
import androidx.appcompat.app.AppCompatActivity
import android.os.Bundle
import android.widget.Toast
import kotlinx.android.synthetic.main.activity_main.*
class MainActivity : AppCompatActivity() {
   override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity main)
        val preferencias = getSharedPreferences("agenda", Context.MODE_PRIVATE)
        b1.setOnClickListener{
            val editor = preferencias.edit()
            editor.putString(et1.text.toString(), et2.text.toString())
            editor.commit()
            Toast.makeText(this, "Datos grabados", Toast.LENGTH_LONG).show()
            et1.setText("")
            et2.setText("")
        b2.setOnClickListener {
            val datos = preferencias.getString(et1.text.toString(), "")
            if (datos.isNullOrEmpty())
```

Problema Propuesto

Codigo XML

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout</pre>
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout width="match parent"
    android:layout height="match parent"
    tools:context=".MainActivity">
    <LinearLayout</pre>
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:orientation="vertical"
        android:padding="15dp">
        <TextView
            android:id="@+id/tv1"
            android:layout_width="match_parent"
            android:layout_height="wrap_content"
            android:text="Puntaje"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
        <TextView
            android:id="@+id/tv2"
            android:layout width="match parent"
            android:layout height="wrap content"
            android:text="0"
            android:textAppearance="@style/TextAppearance.AppCompat.Body2" />
        <EditText
            android:id="@+id/et1"
            android:layout width="match parent"
            android:layout height="wrap content"
            android:ems="10"
            android:inputType="numberDecimal"
            android:textAppearance="@style/TextAppearance.AppCompat.Large" />
        <Button
            android:id="@+id/b1"
            android:layout width="match parent"
```

Interfaz

Codigo Kotlin

```
if(tv2.text=="")
            tv2.text= 0.toString()
        b1.setOnClickListener{
                numero==et1.text.toString().toInt() -> {
                    Toast.makeText(this, "Has adivinado el numero.",
Toast.LENGTH_LONG).show()
                    numero=(1..50).random()
                    Toast.makeText(this, "Se ha generado un nuevo numero",
Toast.LENGTH_LONG).show()
puntaje.edit().putString("score",(tv2.text.toString().toInt()+1).toString()).com
mit()
                    tv2.text=puntaje.getString("score","")
                numero<et1.text.toString().toInt() -> Toast.makeText(this, "El
numero es menor al ingresado", Toast.LENGTH_SHORT).show()
                numero>et1.text.toString().toInt() -> Toast.makeText(this, "El
numero es mayor al ingresado", Toast.LENGTH_SHORT).show()
```
